Wound

- The dressing on your wound needs to stay on for 7 days.
- You can shower or bath, but keep the wound area as dry as possible, gently pat it dry if it gets a little splashed.
- You will have been given some spare dressings to use if needed.
- Staples have been used to close the wound, these need to be removed 7 days after the procedure. Please make an appointment with your practice nurse or GP to arrange this.
- Dissolvable stitches have been used. Leave the dressing on for 1 week before removing and then gently clean the area.
- Glue does not require a dressing. Keep the area dry for 10 days. The glue should naturally peel away during this time.
- If you have any pain/discomfort from the wound take Paracetamol or your normal painkillers as required.
- **Do not lift your arm** on the side of the ICD above shoulder level until after your first check. Use it normally apart from this. (This does not apply if you have had an ICD battery replacement.)

- Take it easy for 2 weeks, **do not do any heavy lifting or strenuous exercise** until you are seen at your 6 week ICD check. (For battery replacements you can get back to normal activities after 2 weeks.)
- Should you experience any palpitations, light headedness, dizziness or breathlessness, contact your GP.
- If you have any queries or worries please contact Taw Ward or the Cardiac Physiologists (numbers on front cover).

If your ICD activates or you think you may have had a shock but feel well

- Contact the Cardiac Physiologists during office hours (numbers on front cover) as you will need to have the device checked.

If you have 2 or more shocks, or feel unwell with 1 shock

- Dial 999, if appropriate, or make your way to the Emergency Department who will arrange for a Cardiac Physiologist to check your device.

Follow-up Checks

- You will have been given an ID card just after the procedure – carry this with you at all times.
- Your ICD will need to be checked by the Cardiac Physiologists before you go home. This check may be done either immediately after your procedure/operation, or the following day on the ward.
- You will have your first ICD Clinic appointment in approximately 6 weeks at the cardiology department, level 2 area D. This will be sent out in the post.

- Most patients will be checked every 6 months after the initial 6 week check.

Driving
- You must inform DVLA and your insurance company that you have an ICD implanted.
- DVLA require you not to drive for:
  - one month after your procedure
  - six months after your procedure
- If you have had a device/battery replacement you can drive after 1 week.
- If you have had a lead reposition or changes made to the medication for your heart rhythm you must not drive for 1 month.
- If you have had an appropriate shock you may not drive for at least 6 months.

Q & As
Is there anything that will interfere with my ICD?
- Household appliances such as microwaves, toasters, electric razors, electric blankets, computers and using broadband wi-fi will not interfere with your ICD as long as they are in good working order.
- Mobile phones may affect the ICD if held within 6 inches of the device, it is suggested that you hold the handset over the ear opposite to the site of the ICD and do not store it in a coat or shirt pocket over the ICD.
- Equipment that emits a strong electromagnetic field should be avoided. It will not damage your ICD but may temporarily interfere with its setting, or cause you to have a shock when not needed e.g. Arc Welding.

Can I travel abroad?
- Yes. You may set off the airport security device when walking through the arch, but if done briskly will not damage your ICD. Before walking through the arch inform the security team that you have an ICD implanted and show them your ID card.

More information on ICDs and interference can be found in the booklet that is given to you with your ID card.

Further questions - please contact the Cardiac Physiologists, or write them down and bring along to your first follow-up clinic.

Remote Monitoring
This service is used by an increasing number of our patients. Please read the following information. If you have any further question or are interested in remote monitoring please ask at any of your future follow-up checks.
- Your device is equipped for remote monitoring using wireless technology via a transmitter in your home.
- The information is sent securely to a web site. This is reviewed by the Cardiac Physiologists.
- Data will automatically be sent for review if:
  - any of the automatic checks go out of range;
  - if your device records any irregularities of your heart rhythm or you receive a shock.
- The information is transferred automatically, usually during the night when you are asleep. A small set up procedure maybe required. The Cardiac Physiologist will talk you through the setting up process if you would like to be remote monitored.
